

WETT Inc. SITE™ Inspection Authorization Form

Inspection Date: _____ Inspection Time: _____

Client Name: _____

Address: _____ Phone: _____

_____ Email: _____

PLEASE READ CAREFULLY BEFORE SIGNING.

The WETT Inc. SITE™ Basic Visual Inspection (Level 1) is a visual inspection of the readily accessible components of the solid fuel burning appliance, or a site-built fireplace and its venting system.

“Readily accessible” means quickly or easily reached for inspection. A Level 1 inspection does not require the use of special tools for opening or removal of any panel, door or other covering; nor does it require the use of ladders. It does not require disassembly of system components.

A Level 1 inspection includes;

1. A determination of compliance of readily accessible components, including the proper use of required components, their required clearances to combustibles, their proper support, as well as their condition and structural integrity;
2. A determination of compliance of readily accessible shielding, outdoor air components, enclosures and ductwork, if present;
3. Readily accessible evidence of operating malfunction, including but not limited to smoke spillage;
4. Obstructions and combustible deposits visible through readily accessible cleanout doors or inspection ports.

The Inspector is Certified for WETT Inc. SITE™ Level 1 Inspections.

This level of inspection is a limited inspection and will not find all conditions associated with the solid fuel burning equipment. More detailed inspections are available at additional cost which will identify code, performance and safety issues that this inspection will not.

I have read, understood and accepted the above Limitations and Conditions of this Basic Visual Inspection.
